

Cyber Security Incident Response Team (CSIRT)

A cyber security incident response team (CSIRT) is responsible for how the company will respond to each incident. There are multiple types of models for how to build this team but the needs and requirements for each company is how to determine what roles are required.

Hierarchical structure which resembles a tree to represent who each member of the team should report to and to outline their relationships and responsibilities in the team.

1. Senior Management

Role belongs to the director who makes all of the decisions for the company.

They are responsible for deciding on actions to take based off analysis provided from each department.

2. Technical Lead/Incident Manager

Both of these roles would be for the Technical Support manager due to the small size of the company.

Responsibilities include:

- Ensuring all actions are being tracked for handling the incident.
- Will work directly with the other department heads closely.
- Summarise everything clearly for the director to understand to allow them to make clear decisions

3. Department Managers

Each department manager analyses their departments to provide the analysis to the Incident Manger:

- Finance and Accounting manager will check if their finances were breached.
- Customer services manager will monitor reactions to the incident and respond to customer queries.
- Sales and Purchasing manager will make sure all payments are still going out to their vendors. (Centre, 2019)
